

## Introduces the Data Quality Assistant™

Now you can add powerful address verification routines to your Mortgage iQ™ system using the Data Quality Assistant, developed by CRMnow. This enhancement offers the following functionality for inserting and verifying profile data for your Mortgage iQ contacts, accounts and borrower records (contact and property addresses):

- Auto fill of City, State and County based on Zip Code (also updates zip code to zip+4 automatically)
- Verify proper address in the following elements (based on national US Postal Database Information-updated quarterly):
  - Suite or apartment numbers in/out of range
  - Address number in/out of range
  - Street address spelled correctly
  - Suffix (Dr., Rd, St., etc.) missing

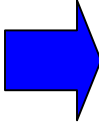

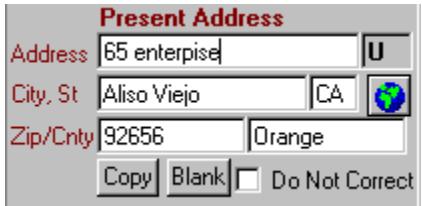

### Here's how it works:

**STEP 1**  
Enter the zip code

Upon entry of zip code, the city, state and county fields are automatically inserted

**STEP 2**  
Enter the address

DQA automatically corrects the street spelling, punctuation, verifies the address is valid and adds the zip+4

### The Data Quality Assistant:

- Reduces data input for Loan Officers and assistants
- Increases efficiency
- Improves data integrity and reliability during the origination and verification process
- Eliminates Fraudulent Data
- 100% correct address data prevents time consuming and costly errors in doc prep and signing
